

Survey on Railway Use Situation of Senior Generation Who Has Retired

Masai MUTO

In Japan, it is predicted that population of working generation more decreases, thus sustainment of the railway passenger demand is an acute problem for the railway market. For easing the problem, it is effective to increase railway passengers of the senior generation who has retired. With this background, an internet questionnaire survey to comprehend the railway use situation of the seniors has been conducted. The result is as follows: the seniors who have used the railway for commuting in their working days still have higher railway use frequency than other seniors, and the most answers to the question on frequency are 1-3 times a month.
