

Technique for Supporting the Horizontal Deployment of the Measures to Prevent Accidents

Takafumi INOUE Ryo NAKAMURA Masayosi SIGEMORI

There are a lot of measures to prevent accident by human errors which are developed and used originally in a workplace. We examined measures introduction support site on the Internet to promote the horizontal development of the measures over other workplaces. It is a system in which the members of the workplace can write in the contents and the evaluation of the measures, and the members of other workplaces know the measures so that they can take them in, and can write in the comments. We discussed the result of the trial of the system in the railway workplace.
