The greening is utilized in order to increase comfort of concourse or waiting room of the station by visual effect. Further, plants are also known to be effective for improving the air environment, by the release of the scent. Then utilization of these effects is expected to further by improve its comfort of station, such as relief of mental stress. Therefore, in this study, we implemented greening of the station waiting room by aromatic plants, and examined the effects of scent of aromatic plants on the comfort of the station. As a result, spatial impression changed to a more favorable one by effects of instruction in addition to greening which utilizes aromatic plants. Furthermore, mental fatigue was reduced, when the scent of the aromatic plants was perceived.
